- 100% uptime guaranteed SLA

Solutions Range:

Hosted Exchange
BusinessMail*
Branded Mail*
Mail Filter/AV
Mail Archiving
Mail Continuity
Lync

**based on Open-Xchange*

Email Service Range

Hosted Exchange – the market leading enterprise class email solution from Microsoft with a user interface and experience that's familiar the world over. Share tasks, calendars, contacts, collaborate on documents and sync with active directory – all through a stable and robust platform.

BusinessMail (Open-Xchange) – a complete, highly available and resilient mail service that delivers the full set of email and collaboration features to meet the demands of today's business. Delivers the same functionality as hosted exchange with the additional integration of social media accounts direct from the user mailbox.

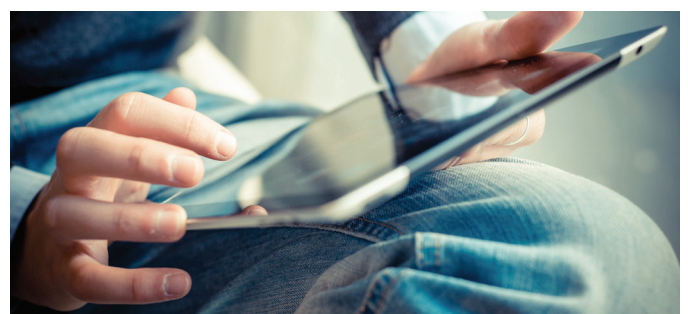

Branded Mail (Open-Xchange) – provides ISPs and other organisations who want to offer their clients a domain-named email account, with an internet accessed Webmail solution that can be branded to provide a seamless user experience, with all the features and functionality of Microsoft Outlook Web Access.

Mail Filter/AV – a state of the art solution combining products from multiple vendors into a single unified solution. The service can be configured to be as strict as required, with varying policies applied to individuals or groups.

Mail Archiving – our cloud based archiving solution that addresses the three main challenges of email usage: regulatory compliance, storage and internal policy management, without the associated tasks of managing, storing and maintaining an in house archiving system.

Mail Continuity – an always-available service that ensures that your email service is always there when you need it the most. Through the feature rich Webmail interface, your email service is always available with anytime, anywhere access.

Lync – Microsoft's instant messaging solution that's so much more – share files, photos and links and, with advanced packages, benefit from VoiP and web conferencing functionality.
